CONVOCLI: INDONESIAN SIGN LANGUAGE APP

Ongoing

Role

UI/UX Designer

Project Type

Self-Initiated

Link

<https://www.figma.com/design/fMncnuHtR9wAM5MIArIKNG/convoSLI.?node-id=0-1&t=2tVbDF3stquXgFYJ-1>

What I learned

- Create a design based on users pain point
- Learn how to apply design thinking to come up with a solution for users problem
- Explored innovative UI solutions and interaction patterns to design a more intuitive and user-friendly experience.

ConvoSLI is an ongoing mobile app that bridge the gap between non-deaf and deaf people. This apps offer features like practice, image recognition for translation, and text-to-sign translation. This app concept is developed through design thinking process to demonstrate the importance of UX design. With the purposes of this app is to offers both educational and real-world use.

2024

Developer and Researcher

Self-Initiated (Undergraduate Thesis)

- Processing and analysing social media posts with NLP
- Handling an imbalanced dataset with SMOTE and saw the effect on model performance
- The importance of analysis visualization for storytelling and gaining better insights.

Classification Report

Label Sentimen	precision	recall	f1-score
0	0.312	0.588	0.408
1	0.939	0.829	0.881

I process about **798 Posts** from Indonesian Users translated to English and Preprocessed (case folding, cleaning, normalization, filtering, and stemming). Weighted the words from the posts using TF-IDF and because there was an issue with the imbalanced data, I handled it with SMOTE. Use the preprocessed data to train the Multinomial Naive Bayes and achieve an accuracy of **80%**, which indicates its effectiveness in detecting positive Posts and finally visualize it for storytelling and better understanding.

REACT STUDENT PORTAL

2023

Role

Frontend Developer

Project Type

Capstone Project – Ruangguru

Link

<https://github.com/fedexid/student-portal>

What I learned

- How to implement a CRUD app with React
- Understanding different uses of React Hooks and Router for navigating
- Realized the importance of a responsive website for different devices

A Student Portal Web Application for users or admin to manage students data where they can add, edit, and delete students in the table. It's a web app with **CRUD** operations developed using **React + React Router** for the page navigation, Tailwind for the responsive styling, and JSON-server for the students data.

PERSONAL WEBSITE

2024

Role

Designer and Frontend Developer

Project Type

Self-Initiated

Link

- <https://portfolio-react-1cdd4.web.app/>
- <https://github.com/fedexid/portfolio-react>

What I learned

- Better understanding of React, Component Structure, and layout design
- Best approach to make responsive styling and animations
- Learn about performance optimization, which led to a good PageSpeed Insight score

A personal website to showcase things about me and my projects, pages include Home, Projects, and About Me section. Its build with React + React Router, TailwindCSS + DaisyUI for the styling, and Framer-Motion for the animation.

The website achieved 100% Pagespeed Insight score for Performance and Accessibility, which comes from intentional improvements to ensure a fast and user-friendly experience

ACE: HOME OF TENNIS

Ongoing

Role

UI/UX Designer

Project Type

Self-Initiated

Link

<https://www.figma.com/design/YD2LzcgDA22nY0xcSTwknm/Tennis-App?t=zJ5tI9OM4nai23bO-1>

What I learned

- Learn the importance of typography and visual consistency
- Realized the importance of considering user needs and maintaining clarity in design when crafting solutions, even without formal user research.

ACE is an ongoing app made for the home of tennis that gives you every news regarding the world of tennis. This app has many features such as player profile, player rankings, etc. This is still a concept with the focus on giving tennis fans a platform, given the lack of fully tennis based apps for smartphones.
